connection of the logical link resource to said ISP server without change, and upon receiving a reconnection request that indicates a connection identifier from a terminal device, using the logical link resource that is set to that connection identifier to implement reconnection, wherein a logical link resource number, which is the number of said logical link resources, is set greater than a physical link resource number, which is the number of said physical link resources".

Claim 2, the prior art or record does not teach of the claimed limitation of "upon receiving a reconnection request that indicates a connection identifier from a terminal device, searches said link information management unit and thus specifies the logical link resource that is set to that connection identifier, and issues a connection request that designates the logical link resource that was specified".

Claim 3, the prior art or record does not teach of the claimed limitation of "upon receiving a request from a terminal device indicating a transition to a dormant state, releasing the physical link resource to the terminal device while maintaining the connection of the logical link resource to said ISP server without change; and
